18. Role Permissions Reference
19. Keyboard Shortcuts
20. Troubleshooting

1. Getting Started & Login

Demo Mode

If Supabase is not configured, the app runs in demo mode. Use these credentials:

ROLE	EMAIL	PASSWORD
Owner	owner@emd.com	owner123
Manager	manager@emd.com	manager123
Cashier	cashier@emd.com	cashier123
Waiter	waiter@emd.com	waiter123

Production Mode (Supabase)

When Supabase environment variables are set, real authentication is used. Users are created in Supabase Auth and assigned a role (owner, manager, cashier, waiter) in their profile.

Logging In

1. Navigate to the app URL in your browser
2. You will be redirected to the login page
3. Enter your email and password
4. Click "Sign In"
5. If you forget your password, click "Forgot Password" to reset via email

Note: The app works offline once loaded. Sales made offline are queued and synced when connectivity returns. Electronic payments (MoMo/Card) are blocked while offline.

2. Dashboard

The dashboard is the first page you see after logging in. It provides a real-time overview of your bar operations.

Key Metrics

- **Today's Revenue:** Total sales for the current day
- **Today's Orders:** Number of transactions completed
- **Active Tables:** How many tables are currently occupied
- **Low Stock Alerts:** Products at or below reorder level
- **Outstanding Debts:** Total unpaid customer debts
- **Stock Value:** Total value of current inventory at bottle price

Charts

- **Sales Trend:** Line chart showing revenue over the past 7 days
- **Category Breakdown:** Pie chart of sales by product category
- **Top Products:** Bar chart of best-selling items

Quick Actions

Use the sidebar to navigate to any section. The bottom navigation (mobile) provides quick access to Dashboard, POS, Tables, and more.

3. POS / Sales

The POS (Point of Sale) is where you take orders and process payments. This is the most-used screen for cashiers and waiters.

Taking an Order

1. **Select a table:** Click a table card at the top to assign the order to a table (optional)
2. **Browse products:** Use the category filters or search bar to find products
3. **Add to cart:** Click "Bottle" or "Shot / Tot" to add items to the cart
4. **Adjust quantities:** Use + / - buttons in the cart to change quantities
5. **Apply discount:** Enter a discount amount if needed (manager+ only)
6. **Select customer:** Optionally attach a customer for loyalty points
7. **Checkout:** Click "Checkout" or press F9

Payment Methods

METHOD	DESCRIPTION	OFFLINE?
Cash	Physical cash payment	Yes
MoMo	Mobile money (Eganow gateway)	No
Card	Card payment (Eganow gateway)	No
Gift Card	Redeem from a gift card balance	Yes
Wallet	Deduct from customer's wallet balance	Yes

Held Orders

Press F8 to hold the current order. This saves the cart without checking out, useful when a customer wants to add more later. Resume held orders from the "Held Orders" panel.

Keyboard Shortcuts

KEY	ACTION
/	Focus search bar
F7	Clear cart
F8	Hold order
F9	Checkout

Voiding a Sale

Owners and managers can void (cancel) a completed sale. This reverses the stock deduction and refunds the payment. Use this for mistakes or cancelled orders. Voided sales remain in the records for audit.

4. Tables Management

Manage your bar's physical tables — see which are occupied, transfer bills, split bills, and generate QR codes.

Table States

- **Available (green):** No active bill, ready for new customers
- **Occupied (gold):** Has an active bill

Actions

- **Click a table:** Toggle between available and occupied
- **Transfer:** Move a bill from one table to another (e.g., customers change seats). Click Transfer, then click the target table.
- **Split:** Split specific line items from a bill into a new separate bill. Useful when a group wants to pay separately.
- **QR Code:** Click "QR" on any table to generate a QR code. Customers scan it with their phone camera to open the Customer Portal, pre-linked to that table. Print these QR codes and place them on the tables.

Customer Activity Feed

The bottom of the Tables page shows live customer activity — new portal orders, waiter calls, and chat messages — so staff can respond in real time.

5. Inventory Management

Track bottle stock and open-bottle shot inventory. Get alerts when stock is low and record stock movements for audit.

Metrics

- **Total Products:** Number of products in the system
- **Low Stock:** Products at or below their reorder level
- **Healthy Stock:** Products above reorder level
- **Stock Value:** Total inventory value at bottle price
- **Categories:** Number of distinct product categories

Adding a Product

1. Click "Add Product"
2. Fill in the form: name, category, bottle price, cost price, stock, reorder level
3. For spirits and wine, you can also set shot price, shots per bottle, and remaining shots
4. Upload a product image (optional) — if no image is uploaded, a branded SVG visual is used
5. Click "Create Product"

Editing a Product

Click the "Edit" button on any product row to update its details — name, price, stock, image, etc.

Quick Stock Adjustments

- **+5:** Adds 5 bottles to stock (records a "purchase" movement)
- **-1:** Removes 1 bottle (records an "adjustment out" movement)
- **Deactivate / Activate:** Toggle whether a product appears in the POS

Movement History

Click "Movement History" to see the last 20 stock movements — purchases, sales, adjustments, and waste. Each movement records the product, type, quantity change, reason, and timestamp.

Stock Movements Types

TYPE	WHEN IT HAPPENS
Purchase	Stock added via +5 button
Sale (bottle)	A bottle is sold via POS checkout
Open for shots	A new bottle is opened for shot sales
Adjustment in	Manual stock increase

TYPE	WHEN IT HAPPENS
Adjustment out	Manual stock decrease or -1 button
Waste	Recorded breakage or spoilage

6. Customers

Manage customer profiles, track their spending, loyalty points, wallet balances, and debts.

Customer Profile

Each customer record includes:

- Name and phone number
- Total spent (lifetime)
- Current debt outstanding
- Loyalty points (1 point per GHS 10 spent)
- Wallet balance (prepaid credit)
- Visit count and last purchase date

Adding a Customer

Click "Add Customer" and enter their name and phone number. New customers start with zero balance, debt, and points.

Loyalty Points

Customers earn 1 loyalty point for every GHS 10 spent. Points can be redeemed for discounts. Points are awarded automatically at checkout when a customer is attached to the sale.

7. Debts Management

Track customers who owe money and record payments against their debts.

Creating a Debt

1. Select a customer
2. Enter the debt amount and an optional note
3. The debt is recorded with the current date

Recording a Payment

Click "Pay" on a debt to record a partial or full payment. The system prevents overpayment — you cannot pay more than the outstanding amount. Each payment records the method (cash, MoMo, card) and timestamp.

Important: Debts can never go negative. The system enforces this at the database level in production mode.

Debt Aging

The Debts page shows aging buckets (Current, 1-30 days, 31-60 days, 60+ days) so you can prioritize collection efforts.

8. Payments

View and manage all payment transactions processed through the system.

Payment Status

- **Successful:** Payment completed and funds confirmed
- **Pending:** Payment initiated but not yet confirmed (MoMo/Card)
- **Failed:** Payment was declined or errored
- **Reversed:** Payment was reversed (e.g., due to a voided sale)

Electronic Payments (MoMo / Card)

Mobile money and card payments are processed through the Eganow payment gateway. These require an internet connection and will be blocked if offline. The payment state machine ensures idempotency — a payment key can only be processed once, preventing double-charges.

9. Gift Cards

Create and manage gift cards that customers can use for payment.

Creating a Gift Card

1. Click "Create Gift Card"
2. Enter the amount (the initial balance)
3. A unique code is generated (format: EMD-XXXX-XXXX)
4. Gift cards are valid for 90 days

Redeeming a Gift Card

At checkout, select "Gift Card" as the payment method and enter the code. The system checks:

- Card exists and is active
- Card has not expired
- Card has sufficient balance

Partial redemption is supported — the remaining balance stays on the card. Fully redeemed cards are marked as "redeemed".

Gift Card Statuses

STATUS	MEANING
Active	Available for use, has balance
Redeemed	Balance fully used
Disabled	Manually deactivated by staff
Expired	Past the expiry date

10. Wallets & Loyalty

Manage customer prepaid wallets and loyalty point balances.

Wallet

Customers can prepay credit into their wallet. At checkout, "Wallet" can be selected as a payment method. The wallet balance is deducted automatically. Wallets cannot be overdrawn.

Topping Up a Wallet

1. Select a customer
2. Click "Top Up"
3. Enter the amount
4. The balance is updated immediately

Loyalty Points

Points are earned automatically at checkout (1 point per GHS 10). Points can be spent via the "Spend Points" action. Points cannot go negative.

11. Reports

View detailed business reports and analytics. Available to owner, manager, and cashier roles.

Available Reports

- **Sales Summary:** Daily, weekly, and monthly revenue
- **Top Products:** Best-selling items by quantity and revenue
- **Category Breakdown:** Sales distribution across product categories
- **Customer Ranking:** Top customers by total spend
- **Stock Valuation:** Current inventory value at cost and retail
- **Profit Estimation:** Estimated profit based on cost vs. selling price
- **Debt Aging:** Outstanding debts grouped by age

12. AI Assistant

Ask natural language questions about your business and get AI-powered insights.

Example Questions

- "What were my best-selling products last week?"
- "Which customers have the highest debts?"
- "How is my stock looking for beer?"
- "What's my profit margin this month?"
- "Which tables generate the most revenue?"

Setup: The AI Assistant requires an OpenAI API key configured in environment variables. Without it, the assistant provides pre-computed insights based on your data.

13. Event Management

Schedule and promote events at your bar — sports matches, live music, nightclub nights, game tournaments, and special events.

Event Categories

CATEGORY	EXAMPLES
Sports	Football matches, boxing, UFC
Music	Live bands, DJ nights, concerts
Nightclub	Club nights, dance parties
Games	Trivia, bingo, gaming tournaments
Special	Holidays, promotions, private events

Creating an Event

1. Click "Add Event"
2. Select category, enter title, date/time, and description
3. For sports: enter home team and away team
4. For other categories: enter host/performer name
5. Set cover charge (optional) and capacity
6. Mark as "Featured" to highlight on the dashboard and portal

Table Reservations

For each event, you can reserve specific tables. Reserved tables are marked on the Tables page so staff knows they're held for the event.

Notifications

The system generates notifications for upcoming events, reminders, and capacity warnings. These appear in the notification bell at the top of the app.

14. Expenses

Record and track business expenses to calculate net profit.

Recording an Expense

1. Click "Add Expense"
2. Enter a title (e.g., "Electricity bill", "Stock purchase")
3. Enter the amount in GHS
4. Select a category (utilities, stock, maintenance, salaries, other)

Expense Categories

- Utilities — electricity, water, internet
- Stock — inventory purchases
- Maintenance — repairs, equipment
- Salaries — staff payments
- Other — miscellaneous expenses

15. Staff Management

View and manage staff members and their performance metrics. Owner only.

Staff Information

Each staff member record shows:

- Name, role, and phone number
- Active status
- Total sales count
- Total orders handled

Roles

ROLE	DESCRIPTION
Owner	Full access to all features and settings
Manager	Operations management, no staff/settings control
Cashier	Sales, tables, customers, debts, reports
Waiter	Sales, tables, customers only

16. Settings

Configure business settings and integrations. Owner only.

Business Settings

- Business name, currency, location
- Receipt footer text

Customer Portal

- **Bar Status Toggle:** Open/Closed — shows customers if the bar is currently open
- **Portal URL:** The link to share with customers (your-domain/portal)

Integrations

- **Eganow:** MoMo + card payment gateway
- **AI Assistant:** OpenAI Responses API
- **Supabase:** Postgres database + authentication

17. Customer Portal

The Customer Portal is a separate web page that customers access on their phones to browse the menu, place orders, call a waiter, and view their wallet/loyalty.

How Customers Access the Portal

1. **QR Code:** Each table has a QR code (generate from Tables page → QR button). Customers scan it with their phone camera.
2. **Direct URL:** Customers can visit your-domain/portal directly
3. **Table link:** The QR code links to /portal?table=tX, which pre-selects the table

Customer Check-In

When a customer first opens the portal, they enter their phone number (and optionally their name). If they exist in the system, their profile is loaded. If not, a new customer record is created automatically. Their session is saved on their phone for future visits.

Portal Features

- **Home:** Bar status, featured events, quick actions
- **Events:** Browse upcoming events and book a table
- **Menu:** Browse all active products with images, add to cart, place order to a table
- **Tables:** See available/occupied tables, select a table
- **My Orders:** View order history and status
- **Waiter:** Call a waiter to your table or send a chat message
- **Wallet:** View wallet balance and loyalty points

Order Flow

1. Customer browses menu and adds items to cart
2. Selects a table (from QR code or manually)
3. Places the order — stock is drawn immediately
4. Staff sees the order in the Customer Activity feed on the Tables page
5. When the customer pays (cash to waiter, wallet, etc.), staff marks the order as "paid"
6. Revenue is recognized and loyalty points are awarded

18. Role Permissions Reference

Complete permission matrix showing what each role can do.

PERMISSION	OWNER	MANAGER	CASHIER	WAITER
Sell (POS)	Yes	Yes	Yes	Yes
Manage Tables	Yes	Yes	Yes	Yes
Manage Customers	Yes	Yes	Yes	Yes
Manage Debts	Yes	Yes	Yes	No
Manage Inventory	Yes	Yes	No	No
Manage Expenses	Yes	Yes	No	No
Manage Events	Yes	Yes	No	No
View Reports	Yes	Yes	Yes	No
Manage Staff	Yes	No	No	No
Manage Settings	Yes	No	No	No
Void Sales	Yes	Yes	No	No

19. Keyboard Shortcuts

Speed up your workflow with these keyboard shortcuts (available on the POS page):

SHORTCUT	ACTION	WHERE
/	Focus the product search bar	POS
?	Focus the product search bar	POS
F7	Clear the current cart	POS
F8	Hold the current order	POS
F9	Open checkout dialog	POS

20. Troubleshooting

Can't Log In

- Check your email and password are correct
- If in demo mode, use the demo credentials (see Section 1)
- If in production mode, ensure Supabase environment variables are set
- Use "Forgot Password" to reset via email

Redirected to Login After Logging In

This is usually a cookie issue. Try clearing your browser cookies for the site and logging in again.

Offline Mode

If you see an "Offline" indicator, the app is working without internet. You can still make cash sales and wallet/gift card payments. MoMo and card payments are blocked. Your sales will sync automatically when connectivity returns.

Product Image Not Showing

If a product image fails to load, the system automatically falls back to a branded SVG visual. This is normal — some product images may be unavailable.

Payment Stuck in Pending

MoMo and card payments may stay in "pending" while the gateway processes them. If a payment stays pending too long, check your Eganow gateway configuration and internet connection.

Customer Portal Not Loading

Ensure the /portal path is accessible. In production, it should be public (no auth required). If you see a login redirect, check the middleware configuration.

Stock Count Is Wrong

Check the Movement History on the Inventory page to trace all stock changes. Every addition, sale, and adjustment is recorded with a timestamp and reason.
